METHOD AND SYSTEM FOR PREVENTING ILLITERACY IN SUBSTANTIALLY ALL MEMBERS OF A PREDETERMINED SET OF STUDENTS

ABSTRACT OF THE DISCLOSURE

5   A method and system for preventing illiteracy and achieving grade-level literacy in substantially all members of a predetermined set of students is disclosed, including the steps of administering standardized oral fluency measures, recording the test results in a database, calculating a standardized predictive measure of literacy for each student, presenting a report for each student including recommendations of

10   curriculum and instruction time, determining a schedule for each student for repeating the steps of the method during the school year. Aggregate reports show a summary of progress for all the students or for a subset of the students. Teachers are surveyed for information regarding their activities in implementing the method. Supervisors are also surveyed for information regarding their supervisory activities. Reports are

15   prepared from the information collected on such teacher and supervisor surveys. Data entry screens and reports may be provided to teachers and supervisors over the Internet.
